

Pharmacovigilance Signal Dashboard

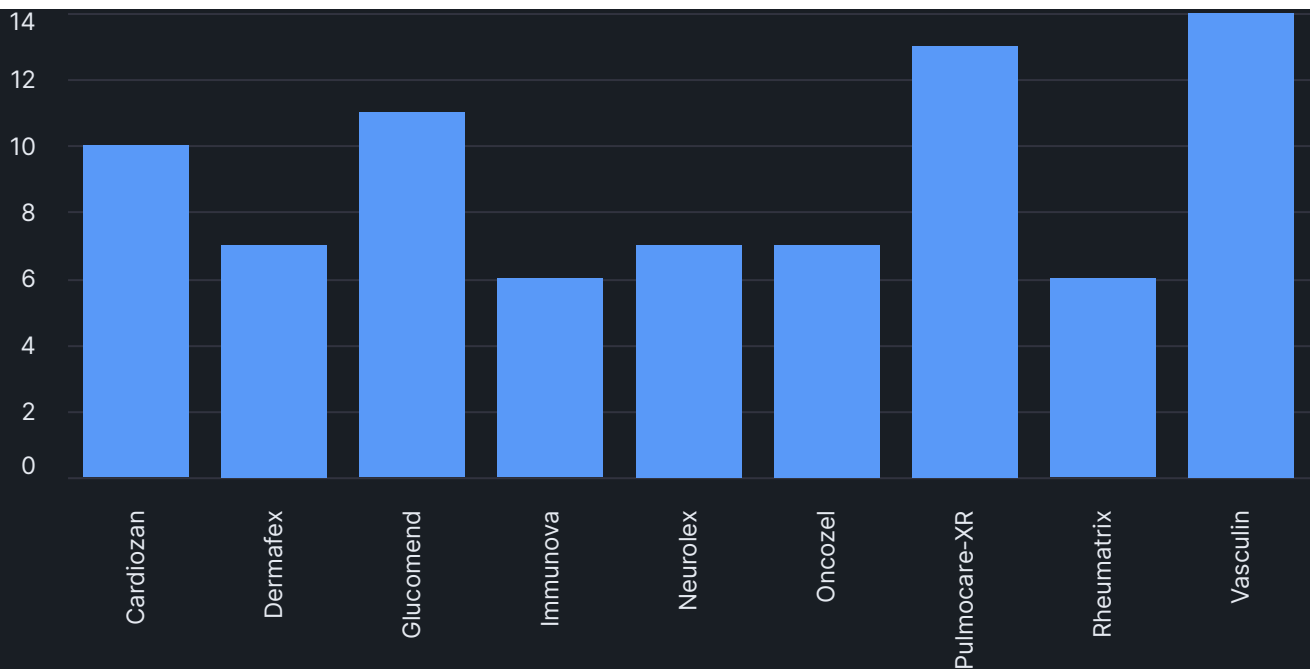

Total Reports	Anomalies Flagged	Countries Covered	Highest Serious Rate
81	1	9	Japan

AE Trend Over Time

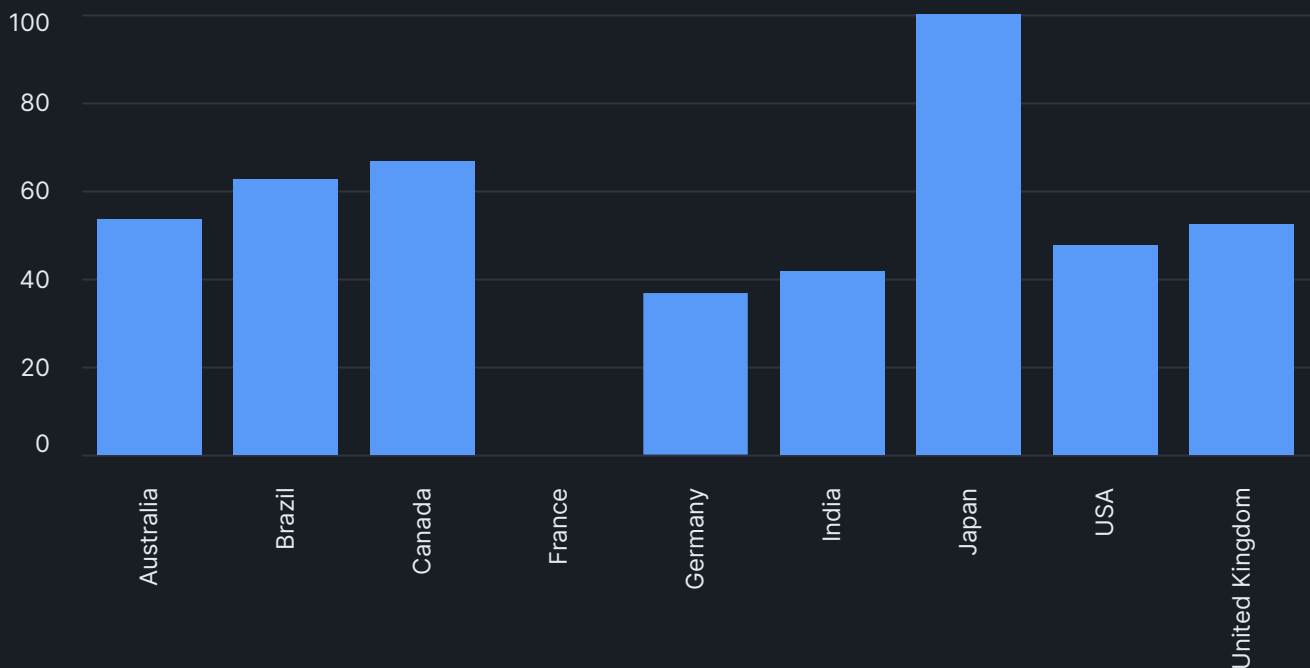

Daily adverse event report volume across the full observed period.

Top Drugs by Report Volume

Report volume varies roughly 2x across drugs (Vasculin highest, Immunova/Rheumatrix lowest) useful context before reading the anomaly panel below.

Serious Event Rate by Country

Japan's rate is markedly elevated relative to other countries a geography-level pattern worth investigating independently of the drug-level anomaly signal below. Rates on months with very few total reports should be read cautiously given small sample size.

Anomaly Signals

	DRUG_NAME	DRUG_NDC_CODE	PERIOD	ACTUAL_REPORTS	FORE
0	Oncozel	"60505-1122-03"	2025-12-01 00:00:00	4.000000	2.00
1	Oncozel	"60505-1122-03"	2025-10-01 00:00:00	2.000000	2.00
2	Rheumatrix	"0781-5566-11"	2025-10-01 00:00:00	2.000000	4.00
3	Immunova	"68180-9900-04"	2025-11-01 00:00:00	2.000000	2.00
4	Immunova	"68180-9900-04"	2025-12-01 00:00:00	2.000000	2.00
5	Pulmocare-XR	"12345-0456-05"	2025-10-01 00:00:00	2.000000	2.00
6	Pulmocare-XR	"12345-0456-05"	2025-11-01 00:00:00	2.000000	2.00
7	Neurolex	"0069-5678-02"	2025-11-01 00:00:00	2.000000	4.00
8	Neurolex	"0069-5678-02"	2025-12-01 00:00:00	4.000000	4.00
9	Cardiozan	"50090-1234-01"	2025-11-01 00:00:00	2.000000	5.00

Anomaly flag indicates statistically unusual report volume for that drug/month. This is a triage signal for reviewer follow-up, not a determination of clinical causality see the Documentation Package, Section 6.4, for the Oncozel case demonstrating this distinction with real data.
